GENERAL GARFIELD'S CHURCH. A Movment on Foot to Build a New

Church Edifice.

National Republican.

The work of rai-ing funds wherewith to erect a large and handsome church for the "christian denomination" in this city has been comm-nced. The general missionary board of that church, whose headquarters is in Cincinnati, acting in barmony with the official board of the Vermont-avenue church in this city, as appointed Joseph Smith, jr., of Cincinnatti, teasurer of the fund to be raised, and Thomas W. Phi'lips, of New Castle, Pa., the general agent. The Christian Standard, the organ of that denomination, in its last issue contains a general announcement to the Diciples of Christ in the United States that the present appears to be an auspicious time to realize a longfelt and general desire for a suitable house of worship in Washington, D. C., the capitol of the nation-a house not extravagant, but creditable to the brotherhood.

A meeting of the official board of the Vermont-avenue church has been held to discuss the subject. It was decided to leave the plan of building and the raising of funds to the general society. If sufficient funds could be raised they would select a site near Thomas circle and commence building in the spring. They will build free of debt-that is, pay as they go, and enter their new church without the millstone of a beavy debt hanging around their necks. raising of from \$50,000 to \$100,000 will probably decide the location in favor of Thomas circle. Less than the first-named amount will cause them to build on the site of their

How to Test Cows.

Prairie Farmer. The d.fliculty of establishing the value of each cow in the dairy is not as great as is generally supposed. The method usually employed is to weigh each cow's milk upon a spring scale as soon as it is drawn, and before pouring it into the general receptacle. A small record-book, containing the name of each cow, and columns for date, weight of milk, etc., renders it a comparatively easy matter. To get a fair average through the year one week's trial for each month is sufficient. In making tests for butter it is only necessary to set each cow's milk seperately and churn it by itself, which will give the yield of butter for a certain quantity of milk.
